FTP Instructions For Mac Users

- 1) If you don't have an ftp client for PC you can download Fetch; it's a free/shareware program.
- 2) Once you have downloaded and installed Fetch, select Tools > Connect.
- 3) In the pop-up window, for Host type: 76.193.221.213
- 4) In User ID type: upload
- 5) Password type: files
- 6) When Sending us File(s): Click on the Clients Incoming folder (should you receive an access is denied message do not be alarmed, for security & privacy reasons the files listed in the Clients Incoming Folder are hidden & viewing the current files in the folder are denied, however entering the folder to place files inside is permissible and allowed, so mainly disregard the message and Drag, copy, or place your file(s) named with less than 8 characters inside the Clients Incoming Folder and although you can't see them in the folder we will be able to).
- 7) When Receiving File(s) from us: After logging in, Click on the Clients Outgoing folder. Your file(s) for download should be inside. Drag, copy, or place your file(s) into a folder located on your computer.

Note: Please call us when you have finished uploading to our FTP server, in order for us to handle your file(s) in a timely fashion. Also, due to the capacity of our FTP bandwidth, it takes approximately 1 minute to transfer a 1 MB file. Please factor upload times accordingly to allow for enough turnaround time.
